

# EASYSHOE VERSA APPLICATION

**The EasyShoe Versa is a hybrid nail-on shoe that features the concussion absorption powers of polyurethane and an internal steel insert. The steel insert gives the shoe more stability in the front portion and offers a stopping point when driving nails.**

The steel insert is located in the toe area and continues to the widest part of the hoof. This positioning allows the rear portion of the hoof the ability to flex with each footfall. The Versa offers incredible versatility for distance rides, trail horses, and horses working on hard surfaces. The wide web design also makes the Versa ideal for therapy cases because it holds pour-in packing very well.

The EasyShoe Versa can be narrowed with a hammer or opened with a shoe spreader. Although the shoe can be shaped, we anticipate most farriers will simply drop it on and shave away excess urethane material. There are only 4mm between each shoe size, which makes urethane removal quick and easy. The goal is to fit each hoof with little to no modification required to save farriers time and money.

No predrilling needed on 5 of the 6 nail locations on the Versa. 5 of the 6 nailing locations are open and for nailing. We did sneak an extra nail location in behind the clip that will need to be drilled if you choose to nail in that location.

*Sold in Pairs.*

## EasyShoe Versa Installation Instructions

The EasyShoe Versa has an internal steel core. The EasyShoe Versa can be narrowed with a hammer or opened with a shoe spreader. Although the shoe can be shaped, we anticipate most farriers will simply drop it on and shave away excess urethane material. There are only 4mm between each shoe size, which makes urethane removal quick and easy. The goal is to fit each hoof with little to no modification required to save farriers time and money.

1.

2.

5.

1. Place the shoe on the hoof and trace with a marker.
2. Remove excess material. A belt sander will work well. A band saw can also be used followed by a belt sander for a smooth finish.
3. Both metal and urethane can be removed in the fitting process. Bend side clips to match hoof angle.
4. Make adjustments to heel length if needed.
5. We recommend E4 Slim for Versa sizes (114-134) E5 Slim sizes for Versa sizes (138-154). Make sure to seat nail heads against steel in shoe. Finish and clinch in the usual fashion.

1. After a fresh trim, measure the width of the hoof across the sole at the widest point.
2. Measure the length of the hoof from the toe to the buttress line of the heel. The buttress line is the farthest weight bearing point of the heel where the hoof wall ends. Do not include the heel bulbs in the measurement.
3. Compare your measurement with the size chart below.
4. Ideally, the length and width measurement will fit into the same size. If the length and width measurements indicate different sizes, select the larger size.
