

Easyboot & EasyShoe Size Charts

How to Measure

The biggest determining factor in EasyCare hoof boot* and EasyShoe success is fit. Always measure as soon as possible after a fresh trim. Waiting to take measurements can result in a poor fit.

Check the product size chart before starting your measurements. If the sizes are shown in millimeters only, be sure to measure in millimeters. Measuring in inches and converting to millimeters will render the measurement process inaccurate.

1. Measure the width of the hoof across the bottom at the widest point.
2. Measure the length of the hoof from the toe to the buttress line of the heel. The buttress line is the farthest weight bearing point of the heel where the hoof wall ends. Do not include the heel bulbs in the measurement.
3. Compare your measurements with the appropriate size chart. Please note: each model has its own unique size chart.
4. Ideally, the length and width measurement will fit into the same size. If the length and width measurements indicate different sizes, select the larger size. If the width and length measurements are more than one size apart, your selected model is not recommended. ** Check your measurements against an alternative product in the EasyCare line - another model may accommodate your horse's hoof shape better.

* Hoof boots should be snug before tightening. After tightening, the boot should be a close fit around the hoof wall. You should not be able to turn or twist the boot.

** If the hoof measurements are more than one size apart in length and width, please call an EasyCare Product Specialist at 800.447.8836.
